Sitesafe, Inc. releases an all-new version of its online RF health and safety training for 2008 - Peoplesafe® 5.0 - now available.

Arlington, VA - January 30, 2008 - RF compliance experts Sitesafe Inc., a Velocitel company, today announced the release of version 5.0 of Peoplesafe®, its popular online RF health and safety training course.

Exposure to radio frequency emissions can cause serious health problems – serious enough that OSHA and the FCC have adopted standards designed to protect the general public and workers by minimizing possible health risks. RF health and safety training – like Peoplesafe® 5.0 – helps keep people safe on the job and companies in compliance with federally mandated regulations.

What is Peoplesafe® 5.0?

Peoplesafe® 5.0 is the newest version of Sitesafe's radio frequency (RF) health and safety online training course. Thousands of professionals have taken previous versions of Peoplesafe® – and version 5.0 has been upgraded with new material, updated graphics and illustrations, interactive quizzes, and an all-new interface and learning management system for the most comprehensive and engaging edition of the training to date.

Features in Peoplesafe® 5.0 include:

- **Updated course material employees can really use** – lessons on OSHA compliance, practical guidelines and visual demonstrations on proper use of protective equipment, recommended RF site visit procedures, and examples of real-world situations
- **The latest in e-learning** – superior high resolution graphics, animations, and illustrations; all that's needed is an internet connection
- **Voiceovers and closed captioning** – students can choose to hear or read the course material
- **Interactivity and quality testing** – challenging new learning activities and quizzes reinforce topics and enhance retention; individualized tests ensure mastery of material
- **Student certification** – students can print out a certificate of completion after passing the course exam; Sitesafe provides a wallet card certifying that the student has completed RF health and safety training
- **Learning management system** – new interface hosted by e-learning company Element K provides easy access for students and training managers
- **AICC and SCORM compliant** – easy integration and delivery on any existing learning management system

"This new version of the Peoplesafe® training covers everything employees and contractors need to know to evaluate potential RF hazards in the workplace," said Matthew Butcher, P.E., Vice President of Development and Engineering for Sitesafe, "and we're confident the training's new look, feel, and improved interactivity will be well received by our customers and students."

A single-user license for Peoplesafe® 5.0 costs \$250.00. Quantity discounts for multiple users and recurring year contracts are available. A free demo of the course will be available for review at www.peoplesafe.net on February 20, 2008.

Sitesafe, Inc., a Velocitel company, provides industry-recognized RF health, safety, and regulatory compliance solutions to wireless telecommunications companies. We offer a comprehensive portfolio of services designed to assist companies that are required to comply with FCC and OSHA regulations pertaining to human exposure to RF energy and responsibilities of wireless carriers to protect the patterns of existing AM stations. Velocitel is a wireless network services company with innovative, flexible, and responsive solutions for developing and maintaining today's wireless communications systems. Velocitel and Sitesafe together can take you from the earliest stages of wireless site planning, to site deployment, and all the way through to due diligence and ongoing compliance documentation. Visit us at www.sitesafe.com and www.velocitel.com.
